# Land availability

- Land produces 95% of the calories
- Only 13-18% naturally highly fertile
- In the EU 25 m<sup>2</sup>/s degradation rate

Source A.R. Jones JRC  
from FAO Map of World Soil Resources 1:25 000 000

**1950: 13.2 ha**

*Source: UN population data*

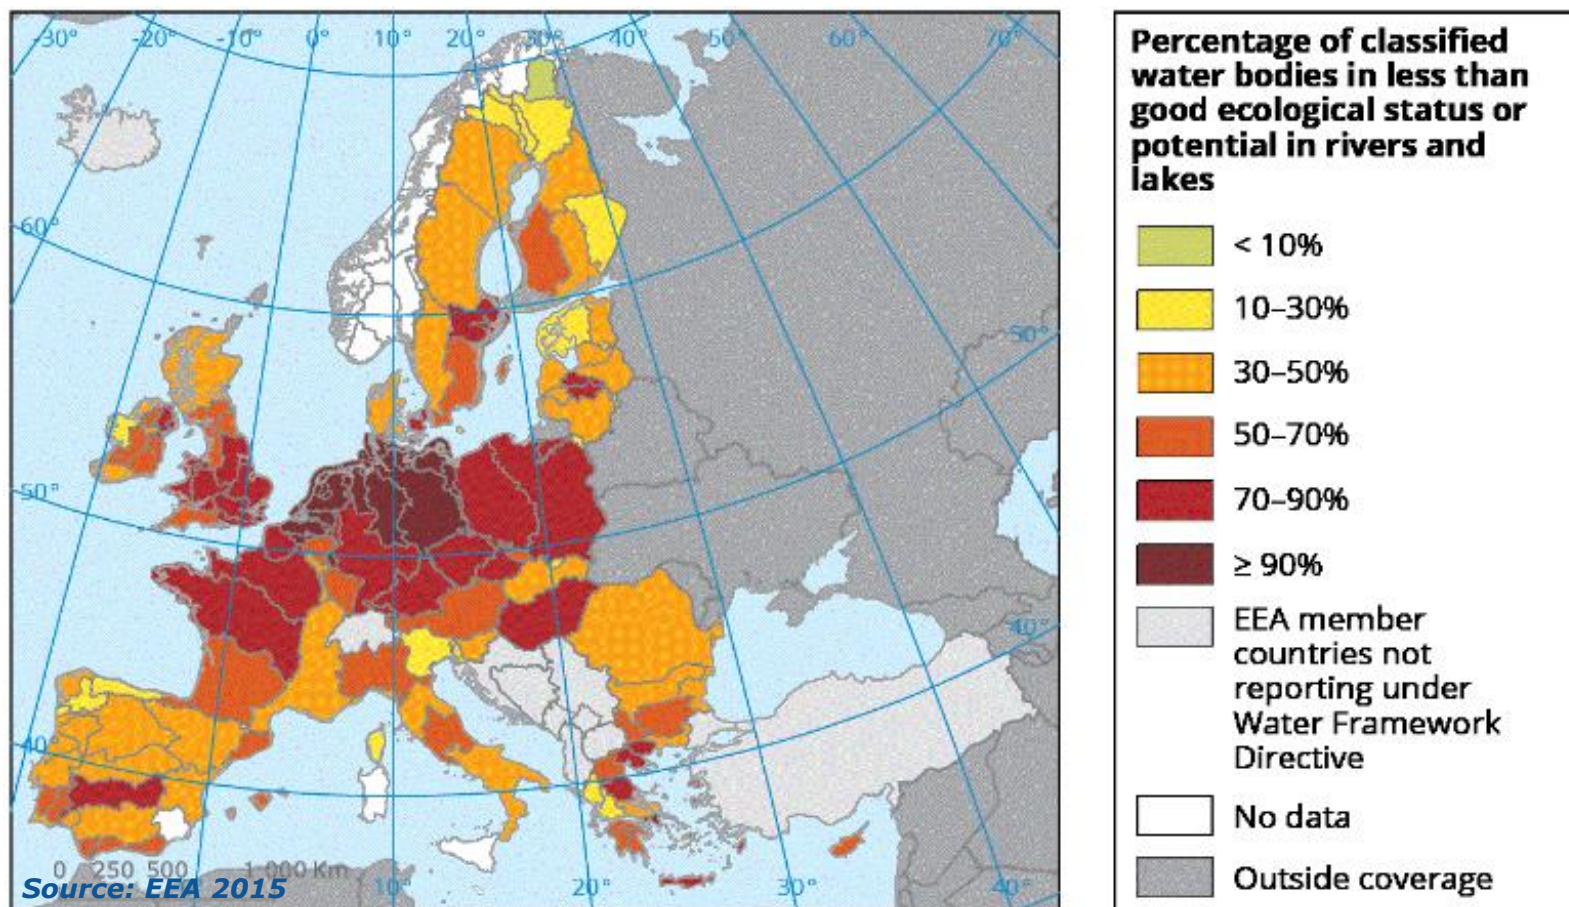

**2010:  
2.93 ha**

**2050:  
1.26 ha**

# The Water Challenge

- **70% of water used in agriculture, 89% in 2050**
- **40% gap between global water demand and supply by 2030**

# Water need for food

For 1kg produced :

# Solutions

# Managing complexity

## **Nexus principle**

*Understanding interdependences*

**Water – Energy – Food – Land - Ecosystem**

**Holistic modelling platforms**

# Data analytics and visualisation

# Resource efficiency

# Food waste

- **EU = 123 kg/cap/y**
- **Sub-Saharan Africa, S and SE Asia = 6 – 11 kg/cap/y**

# Biomass

**Almost 1/4 of biomass in EU not used**

*Source JRC 2015: The bioeconomy in the European Union in numbers – Facts and figures on biomass, turnover and employment*

# Productivity

## Growth in World Agricultural Output (%)

Source: Fuglie (2015) and JRC own calculation

# Agricultural productivity and R&D

## Slowdown in agricultural productivity after 1990 (Globally)

## Slowdown in public agriculture R&D spending (e.g. U.S.)

# EU in technological innovation

Source: JRC cumulative graphs, data based on Scopus and Patstat. 2000 to 2014.

European  
Commission

### Conventional plant genetic transformation (agrobacterium)

### Crop Irradiation

### GPS in Agriculture

### Precision farming

### Sensors in agriculture

### Robots and Drones

### Synthetic Meat

### Genome editing

Patenting for main players in 8 agriculture-related technologies

# Culture and behaviour

# Urbanisation Middle class growth

2010-2030  
+22% *Food*  
+ 33% *Animal proteins*

Change in the nutrition, consumption pattern

# Food waste

# Main Messages

- Land and water becoming critical with collateral consequences for the EU
- We need to manage complexity
- Better use of existing material resources
- Cutting edge technology and technology uptake to increase the productivity
- Social innovation and behavioral change
