

How the future CAP will contribute to the **EU Green Deal**

May 2020 #EUGreenDeal

The European Green Deal is our strategy for sustainable growth. This will happen by turning climate and environmental challenges into opportunities across all policy areas and making the transition just and inclusive for all.

The Common Agricultural Policy (CAP) will help this sustainability transition and strengthen the efforts of European farmers to tackle climate change and protect the environment. 40% of the CAP budget will be climate-relevant.

<u>Sustainability is at the heart of the CAP</u>. The CAP aims at ensuring a sustainable agriculture with respect to economic, social and environmental aspects. The CAP currently offers farmers a number of ways to contribute to our climate and environmental ambitions. <u>In the future CAP, we'll go even further!</u>

Green Architecture

The future CAP gives Member States the support, flexibility, evidence-based tools, and responsibility to be ambitious in tailoring the design and funding of environmental and climate schemes.

Enhanced conditionality

Conditionality links EU-funded income support to environment- and climate-friendly farming practices and standards.

Eco-schemes

Eco-schemes will unlock new funding and additional incentives for climate- and environment-friendly farming practices.

Agri-environment-climate measures and investments

EU rural development support will aim to enhance ecosystems, promote resource efficiency, and help us move towards a lowcarbon, climate-resilient economy.

Farm Advisory Service

The farm advisory system will draw on a fuller range of economic and environmental data to deliver up-to-date technological and scientific information to advise farmers.

CAP Strategic Plans

Taking into account Member States' specific needs, national level CAP strategic plans will combine a wide range of local and EU-level objectives to deliver targeted, tangible results.
