MMO Economic Board

Meeting of 19 September 2019

progressive reduction of private SMP stocks (all public stocks released) thanks to a contained production and a strong export performance. Butter stocks present more uncertainties due to changes in fat uses in the industrial sector, but are estimated at 20 000 to 70 000 t higher than last year. Cheese stocks are at their highest in the last 5 years, but at levels considered as not of concern by the industry.

Market fundamentals for dairy remain positive and global markets are in relatively good balance due to reduced milk output and strong demand. Sentiment is weakened by Brexit, other geo-political uncertainty factors and worsening trade conflicts.

Global demand is solid (except for whey) but a slowdown can be expected in H2 2019 due to intensive buying in H1.

With regard to retail sales, domestic consumption of dairy products is generally flat or declining for most product categories (with the exception of butter, cream and cheese) albeit at higher prices. The trend seems to have reverted to a more positive one in Italy. Sales of organic dairy products maintain steady growth.
