MONITORING
EU AGRI-FOOD TRADE

DEVELOPMENTS in July 2023
Publication: October 2023
The latest available consolidated trade data at EU level cover market developments in July 2023. Monthly figures can be compared with the previous month. Year-on-year change compares the cumulative trade since the beginning of the year with the same period in the previous year.

The trade figures are expressed in values, except when specifically mentioned. The unit value is the average price of products traded in the period concerned (trade value at the border divided by quantity registered).
HIGHLIGHTS: EU agri-food slowed down in July 2023, but trade surplus remained stable

Despite a reduction of both imports and exports, EU agri-food trade balance remained stable month-on-month at +EUR 6.2 billion in July 2023. The cumulative trade balance (January to July 2023) reached +EUR 38.6 billion, EUR 7.3 billion higher compared to the same period in 2022.

EU exports declined by 8% month-on-month and reached EUR 18 billion in July 2023, 5% lower than in July 2022. Cumulative exports reached EUR 133.5 billion and remained 5% higher compared to the same period in 2022, with increases in particular for cereal preparations and preparations of fruit and nuts.

EU imports continued to decrease in July to EUR 11.8 billion, a 11% reduction month-on-month and 17% below their 2022 level. Cumulative imports (from January to July 2023) reached EUR 94.9 billion, at a similar level than in 2022, with increases in imports of cereals and reductions in imports of oilseeds and protein crops as well as vegetable oils.
EU AGRI-FOOD EXPORTS

EU AGRI-FOOD EXPORTS IN JULY BELOW THEIR 2022 LEVEL

EU agri-food exports decreased by 8% month-on-month in July 2023, to reach EUR 18 billion. For the first time of the year, they fall below their level a year prior, 5% below July 2022. This appears to be mostly explained by reduced export volumes, while export prices remain high.

Nonetheless, cumulative exports from January to July 2023 reached EUR 133.5 billion and remained EUR 6.5 billion (+5%) higher than for the same period last year.

Exports to UK remained at a high level, with a +EUR 2.7 billion increase (+10%) between January and July 2023 compared to the same period last year. Cereals preparations, preparations of fruits and vegetables and pigmeat are the categories that saw the largest increases (mostly due to higher prices).

A significant increase of exports to Türkiye can also be noticed, with +EUR 846 million (+38%). This increase is explained by the large increase of beef exports (both in live animal and meat), from EUR 16 million between January and July 2022 to EUR 348 million in 2023. Increases in exports of oilseeds and protein crops, coffee and cocoa, as well as pet food and forage crops are also significant.

Exports to the US remained 7% below their 2022 level (-EUR 1.2 billion), mostly due to reduced exports of spirits and liqueurs compared to the two last years.

EU exports continued to be reduced in direction of Egypt, with -31% (-EUR 486 million), as well as to Iran (-EUR 339 million, -52%) and Tunisia (-EUR 274 million, -37%).

EXPORT VOLUMES HAVE DECREASED, EXCEPT FOR CROPS

Exports of cereal preparations and milling products remained high between January and July 2023 compared to 2022 (+EUR 1.5 billion, +12%), as well as those of preparations of fruit and vegetables (+EUR 1.2 billion, +21%) and confectionary and chocolate (+EUR 864 million, +16%), mostly due to high prices.

Volumes exported of vegetable oils, oilseeds and protein crops and cereals increased by 35%, 16% and 11% respectively compared to 2022. Despite this increase in volumes, the total value of cereals exports declined due to lower prices.

Export values decreased for pigmeat (-EUR 455 million, -6%), spirits and liqueurs (-EUR 259 million, -5%) and olives and olive oil (-EUR 97 million, -3%), with even larger reductions in volumes. Exports of sugar decreased by 32% in volume, but this was compensated by higher export prices, resulting in a stable export value. A similar situation is observed for exports of pet food and forage crops, as well as vegetables, with decreases of respectively 18% and 15% in volume but increases in value.
EU AGRI-FOOD IMPORTS

EU IMPORTS CONTINUED TO DECREASE IN JULY

EU agri-food imports continued to decrease in July, at EUR 11.8 billion, a 11% reduction month-on-month and 17% reduction compared to July 2022. This evolution of the value of imports is explained by a decrease of import prices since the beginning of 2023, combined with the reduction of import volumes in July. Cumulatively, imports from January to July 2023 reached EUR 94.9 billion and remained stable compared to the same period last year (-1%, -EUR 814 million).

Imports from Ukraine increased by EUR 1.8 billion between January and July 2023 compared to 2022, mainly in cereals. Imports also increased from Türkiye, with a +EUR 483 million (+15%) increase, and from Egypt, with a +EUR 448 million (+49%) increase, in both cases explained by a rise of vegetables and fruits and nuts imports.

Imports from Argentina decreased by EUR 1 billion (-27%), in large part due to a reduction of soya meals imports. Imports from Brazil also decreased by EUR 892 million (-8%), with a large decrease in soya beans and coffee, partly compensated by a rise of soya meals and sugar imports. Imports from Australia were reduced by EUR 771 million (-28%), mostly due to a reduction of rapeseed imports.

TRADE BALANCE IN OILSEEDS IMPROVED

After 11 months of high imports compared to the previous years, volumes of cereals imported in July 2023 were back at the same level than in July 2022, with 2.3 million tons. Cumulatively since January, cereal imports remained +EUR 1.6 billion (+29%) higher than in 2022.

Sugar imports have remained high (+EUR 760 million, +140%), as well as those of tobacco products (+EUR 847 million, +47%) and vegetables (+EUR 605 million, +19%).

Imports of oilseeds and protein crops have decreased by EUR 1.7 billion (-11%) between January and July 2023 compared to 2022, due to lower prices but also lower import volumes (-7%). Combined with the increase of exports, this led to a reduction of the trade deficit in oilseeds and protein crops from -EUR 13.6 billion in 2022 (January to July) to -EUR 11.8 billion in 2023.

A similar situation can be observed for vegetable oils, for which imports decreased by EUR 1.6 billion (-27%) and by 7% in volume compared to the same period in 2022. With the increase in exports, this resulted in an improvement of the trade balance for vegetable oils from -EUR 4 billion in January-July 2022 to -EUR 2.2 billion in 2023.
